*Forest Man
of India*
Jadav Molai Payeng

Jadav Payeng, known as the “Forest Man of India,” is an environmental activist from Majuli, Assam. Over the past several decades, he has single-handedly transformed a barren sandbar on the Brahmaputra River into a lush forest, now known as Molai Forest. His journey began in 1979 when he was just 16 years old, motivated by the sight of dead snakes that had washed ashore after a flood. Payeng started planting bamboo and other trees, and his relentless efforts have resulted in a thriving ecosystem that spans over 1,300 acres. This forest is now home to various wildlife, including Bengal tigers, Indian rhinoceroses, and elephants. In recognition of his incredible work, Payeng was awarded the Padma Shri, one of India’s highest civilian honors, in 2015.

Activities

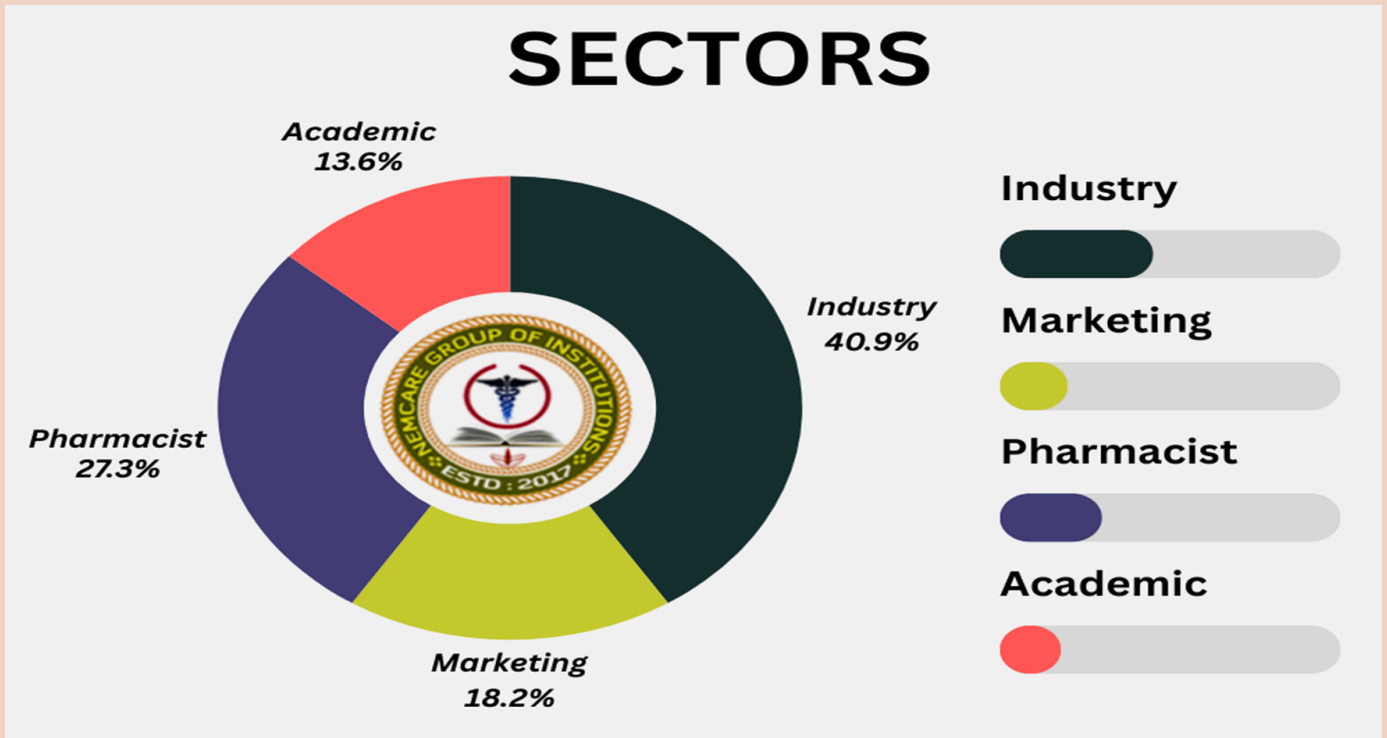

73RD IPC HYDERABAD

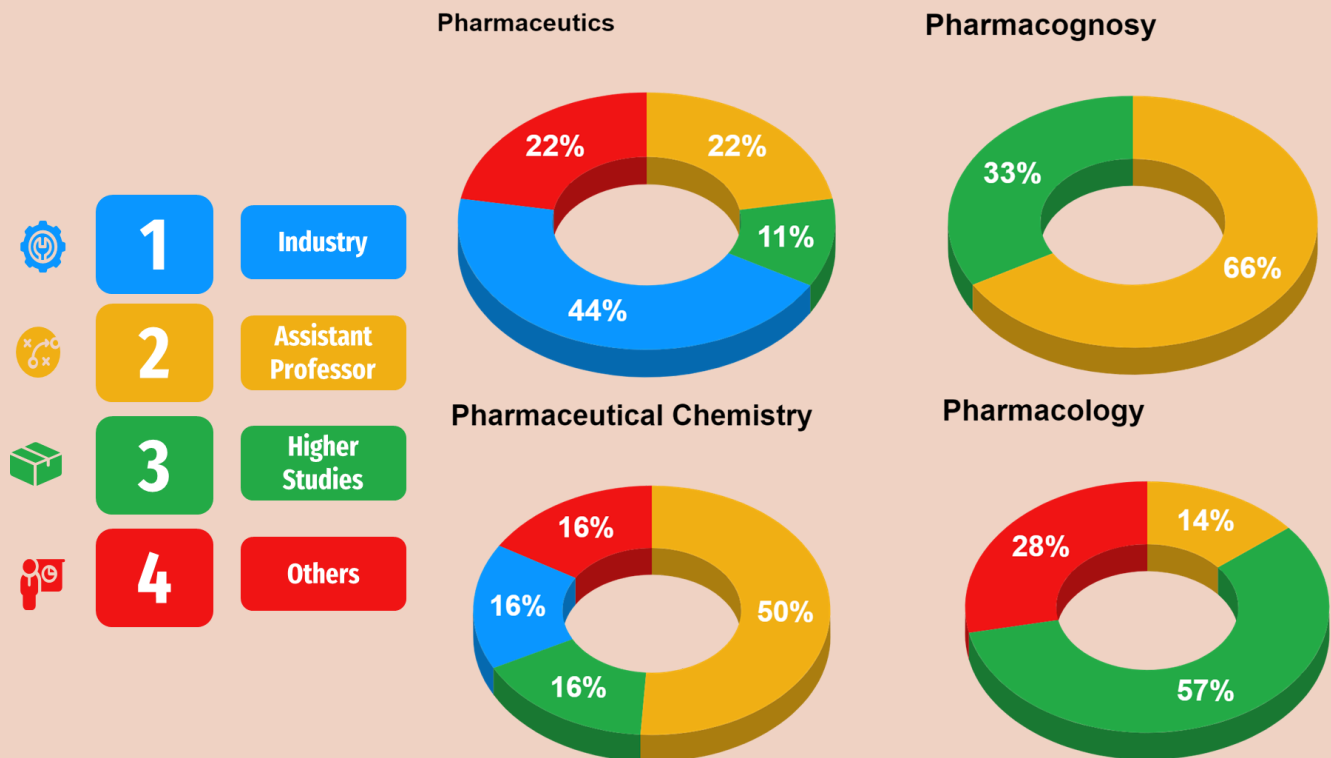

The remarkable participation of 23 Bachelor of Pharmacy students, accompanied by 3 dedicated faculty members, in the esteemed 73rd Indian Pharmaceutical Congress held in Hyderabad. This prestigious event brought together some of the brightest minds in the pharmaceutical industry, providing an ideal platform for our students to showcase their innovative research works. The congress offered a unique opportunity for each participant to present their research through posters, demonstrating their tireless efforts and academic excellence. Our students seized this chance to share their groundbreaking work, exploring various aspects of pharmaceutical sciences. Their presentations sparked engaging discussions and received accolades from peers and industry experts alike. Beyond the academic realm, the team had the chance to discover the captivating beauty of Hyderabad, fondly known as the City of Pearls. This enriching experience allowed them to immerse themselves in the city's rich cultural heritage, historic landmarks, and culinary delights. From the iconic Charminar to the serene Hussain Sagar Lake, our students experienced the best of Hyderabad's hospitality and charm. Participating in the 73rd Indian Pharmaceutical Congress was a truly enriching and memorable experience for our students. It not only provided a platform for academic growth but also fostered personal development, teamwork, and networking opportunities. We are proud of our students' achievements and look forward to their continued success in the pharmaceutical industry.

Anamaya - Piramal Foundation

Strengthening the health system in Assam is a crucial endeavor, necessitated by the region's unique challenges and the significant gaps in its healthcare infrastructure. Assam, with its diverse geography and large tribal population, experiences significant disparities in healthcare access, especially in rural and remote areas. These disparities are compounded by the state's high burden of communicable diseases such as tuberculosis, malaria, and other vector-borne illnesses, alongside a rising prevalence of non-communicable diseases like diabetes and hypertension.

One of the most pressing concerns in Assam is its high maternal and infant mortality rates, which underscore the need for strengthened maternal and child health services. The shortage of healthcare professionals in rural and remote areas further exacerbates the challenges, making it difficult to deliver adequate healthcare services.

Upgrading healthcare facilities, particularly in rural and tribal areas, is essential to ensure that primary healthcare centers are well-equipped with the necessary medical equipment and have access to reliable utilities. Efforts must also be made to recruit and retain healthcare professionals in underserved areas through incentives and capacity-building programs.

Healthcare professionals need skills like critical thinking, problem-solving, communication, and empathy. So, academic institutions like NEMCARE Group of Institutions, Mirza make sure their students are skilled, well-trained, and ready to adapt to new healthcare technologies and trends to succeed in the field.
